

# PH-ABT-NSF-UCBI-0204-LH

#### **Product Description**

These cutting-edge pharmacy refrigerators are certified in accordance with the NSF/ANSI 456 Standard for Vaccine Storage. With this certification, units protect pharmaceuticals at optimal temperatures, preventing waste and allowing for peak delivery. Our Premier line includes premium features such as extensive alarm systems and digital touch pad displays.

These solid door built-in refrigerators are left hinged and utilize microprocessor controllers and feature temperature alarms, remote alarm contacts, and probe access ports with included probes. Units run on natural, hydrocarbon refrigerant for environmental health and energy efficiency.

#### **General Description and Application**

Single Solid Door Pharmacy/Vaccine Undercounter Refrigerator Built-In Left Hinged Description

Indoor use only, +18°C to +26°C (+65°F to +78°F), <70% RH Operational environment

2.5 cu. ft. gross volume Storage capacity

One swing solid door, self-closing, left hinged, non-reversible, magnetic sealed gasket, keyed Door

lock

Four shelves (three adjustable/one fixed) with guard rail on back **Shelves** 

Leveling legs Mounting N/A Interior lighting

Forced Air technology, patent pending Airflow management

Side wall port (3/8") dia. External probe access

Cabinet is foamed-in-place with EPA compliant high density urethane foam Insulation

White powder coated steel **Exterior materials** 

Pyxis®, Omnicell® and AcuDose RX® compatible Access control

Two (2) years parts and labor warranty, excluding display probe calibration General warranty

Five (5) years compressor warranty Compressor warranty

72 lbs. **Product Weight** 88 lbs. **Shipping Weight** 0.9 Amps Rated Amperage

Power Plug/Power Cord NEMA 5-15 plug, 8 to 10 ft typical, conforms to UL471 requirements, Vaccine storage power

cord warning label

110-120V AC: 15 A (minimum) Facility Electrical Requirement

Agency Listing and Certification Certified in accordance with the NSF/ANSI 456 Standard for Vaccine Storage. UL, C-UL, ETL, C-

ETL listed (either single or dual agency listings) and certified to UL471 standard, hydrocarbon

refrigerant safety.

**Included Accessories** Pharmacy refrigerator/freezer toolkit and temperature logs

# **Refrigeration System**

Hermetic, high performance Compressor Refrigerant EPA SNAP compliant, R600a, Isobutane Condenser Hybrid fin and tube with low noise fan

Plate wall Evaporator

Defrost Cycle optimized, zero energy

## **Performance**

Uniformity<sup>1</sup> (Cabinet air) +/-1.1°C +/- 0.7°C Stability<sup>2</sup> (Cabinet air) Maximum temperature variation +/- 1.2°C (Cabinet air)

Temperature rise after 8 sec door

Temperature did not exceed 7.2°C at any probe for all required NSF/ANSI 456 testing

openings protocols<sup>3</sup>

Recovery after 3 min door opening All probes recover to under 8°C within 7.5 min.

Energy consumption 0.58 KWh/day4

Average heat rejection 1.00 KWh/day (142 BTU/h)4

Noise pressure level (dBA) 34 or less installed Pull down time to nominal operating 42 min

Simulator ballast

## Controller, Configuration, Alarms and Monitoring

Controller technology Parametric, microprocessor, LED display with 0.1°C resolution

1°C to 10°C (Setpoint must remain unaltered from the factory setting to remain compliant Temperature setpoint range

with NSF/ANSI 456 Standard for Vaccine Storage requirements)

Calibration Calibrated using a NIST traceable device, certificate included State switching remote alarm contacts External alarm connection

Visual and audible indicators

High / Low temperature, compliant with alarm requirements defined in the NSF/ANSI 456 Alarms

> Standard for Vaccine Storage Glass bead thermal media

Performance data acquired at 22°C ambient, using NSF/ANSI 456 compliant validation ballast probes, empty chamber, during stabilized steady state operation and a DAQ sampling rate of one measurement every 10 seconds

- 1 Uniformity is defined as the maximum variance in temperature across all probes at any point in time over the testing period
- 2 Stability is defined as the maximum variance in temperature experienced by any single probe over the testing period
- 3 Temperature performance for all loaded and unloaded door opening protocols, all alarm, controller and probe requirements as defined in the NSF/ANSI 456 standard for vaccine storage
- 4 Data per Energy Star test results or equivalent testing and calculation. Heat rejection based on daily averages, not continuous operation. Performance exceeds Energy Star requirements.

### **Product Data Sheet**

Undercounter 2.5 cu. ft. Built-In Vaccine Refrigerator -Certified to NSF/ANSI 456 Standard for Vaccine Storage

### Certifications

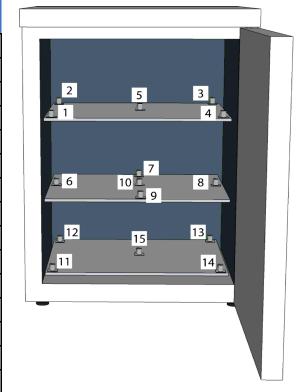

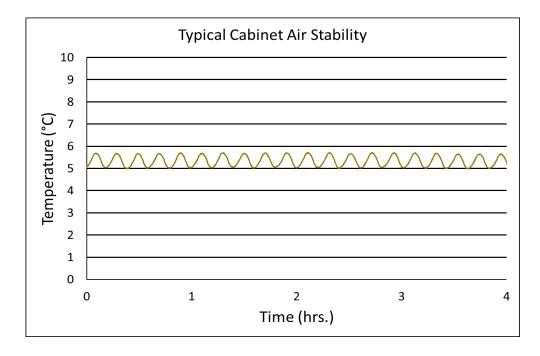

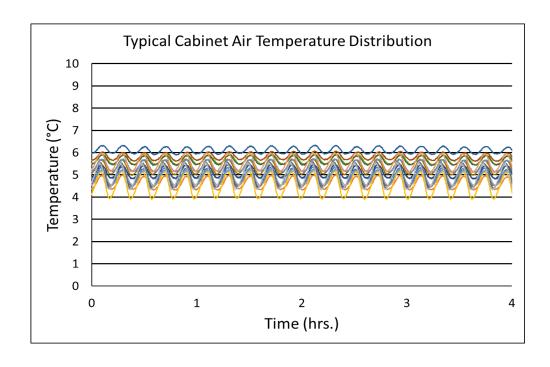

\*-one or more of these certifications may apply to this unit.

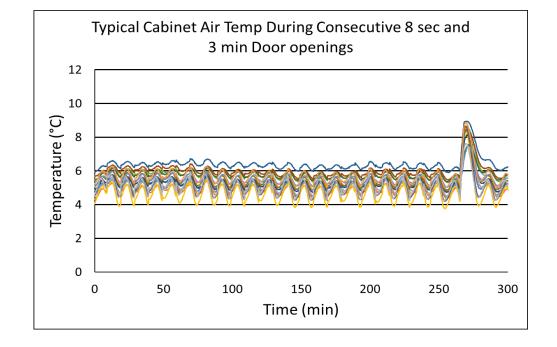

Temperature Probes							
Probe	Ave	Min	Max				
1	4.9	4.9 4.4					
2	4.6	4.3	5.0				
3	4.8	4.5	5.2				
4	4.5	3.9	5.2				
5	5.0	4.8	5.3				
6	5.7	5.4	5.9				
7	5.1	4.8	5.5				
8	5.8	5.6	6.1				
9	5.0	4.4	5.6				
10	5.3	5.0	5.7				
11	6.1	5.9	6.3				
12	5.7	5.4	5.9				
13	5.4	5.1	5.7				
14	5.5	5.1	6.0				
15	4.9	4.3	5.6
